Message from the Director
Dinesh Bharadia

As we break into the summer months, we continue to be inspired and energized by the work being conducted at the Center for Wireless Communications (CWC). Our commitment to developing new technologies to address the technical challenges of wireless advancements as a way to bring together university researchers with industry partners to advance the world. Recognizing the potential and need for innovation, the CWC was established on the cusp of the wireless revolution. Twenty-five years later, wireless cell phones were used almost exclusively for talking. However, many forward-thinking researchers were already imagining a highly collaborative and connected future of wireless possibilities.

In 1995, the UC San Diego Center for Wireless Communications (CWC) was founded by Sujit Dey and colleagues in the electrical and computer engineering department at the UC San Diego Jacobs School of Engineering. The Center was established to help bridge the technology and research gaps between academic and industry partners in the field of wireless communications.

The CWC is known for its cutting-edge research in wireless technologies, with a focus on developing innovative solutions to address real-world challenges. The Center's researchers have made significant contributions to the fields of wireless communications, networking, and signal processing.

In 2020, the CWC celebrates its 25th anniversary, a milestone year that marks the completion of its first quarter-century of operation. The Center has been instrumental in advancing the field of wireless communications, and its impact continues to grow as it continues to envision a future of wireless possibilities.

Warmest regards,
Dinesh Bharadia
